Coronavirus disease 2019 (COVID-19) is a respiratory illness that can spread from person to person. Symptoms often include a fever and a cough or difficulty breathing. The outbreak first started in China, but cases have been identified in a growing number of other areas, including the United States. On March 11, 2020, the World Health Organization (WHO) characterized the COVID-19 outbreak a pandemic, meaning the disease has spread worldwide.

The virus causing COVID-19 is called SARS-CoV-2. SARS-CoV-2 is a novel virus, which means there is still much to learn about the number of cases, risk factors, signs and symptoms, and how it is spread. Based on what we know about COVID-19 and other coronaviruses diseases, COVID-19 is spread mostly from person to person in close contact through respiratory droplets produced when an infected person coughs or sneezes. Close contact with a person can occur when you:

- Are within about 6 feet (2 meters) of a person with COVID-19 for a prolonged period (more than a few minutes).
- Have direct contact with body fluids from a person with COVID-19. Body fluids may include blood and respiratory droplets.

It may be possible that coronaviruses survive on surfaces for several hours to several days. It may be possible that a person can get COVID-19 by touching a surface or object that has the virus on it and then touching their own mouth, nose, or possibly their eyes, but this is not thought to be the main way the virus spreads.

As a Bus Transit Operator, how can I protect myself?

**Regularly perform proper hand hygiene:**

- Hand hygiene is one of the single most important infection control measure.
- Wash your hands with soap and water when available for 20 seconds, particularly when hands are visibly soiled.
- If soap and water is not available on a regular basis, use an alcohol-based hand sanitizer containing at least 60% alcohol. Cover all surfaces of your hands and rub them together until they feel dry.

**Key times to clean hands include:**

- Before beginning a work break and at the end of the shift.
- After touching other commonly touched surfaces, such as fareboxes and handrails.
- After providing assistance to a passenger.
- After blowing one’s nose, coughing, or sneezing.
- After using the restroom.
- Before eating or preparing food.

- Avoid touching your eyes, nose, and mouth with unwashed hands or when wearing gloves.
- Avoid close contact (i.e., within 6 feet) with transit passengers; consider allowing transit passengers to enter and exit the bus through rear entry doors, requesting passengers to avoid standing or sitting within 6 feet of the bus driver.
- Avoid touching surfaces often touched by transit passengers.
- Do not touch surfaces contaminated by body fluids.
- Use gloves if touching surfaces contaminated with body fluids or if required to physically contact a transit passenger. Gloves should be carefully removed and discarded after each use, and you should immediately wash your hands.
- Use disposable disinfectant wipes on surfaces in the driver cockpit commonly touched by the operator.

Where can I get more information?

Stay informed. Talk to your employer, supervisor, union representative, or airport personnel who are responsible for responding to COVID-19 concerns. See these sources for more information on worker exposures to COVID-19: NIOSH Workplace Safety and Health Topic: www.cdc.gov/niosh/emes/2019_ncov.html
